

# Manual

## 1. Premise:

About Fanbox and Fantia, you should get Cookies from browser by yourself.

Patreon need input your Mail-Address, and login in the inside browser.

How to get Cookies from browser:

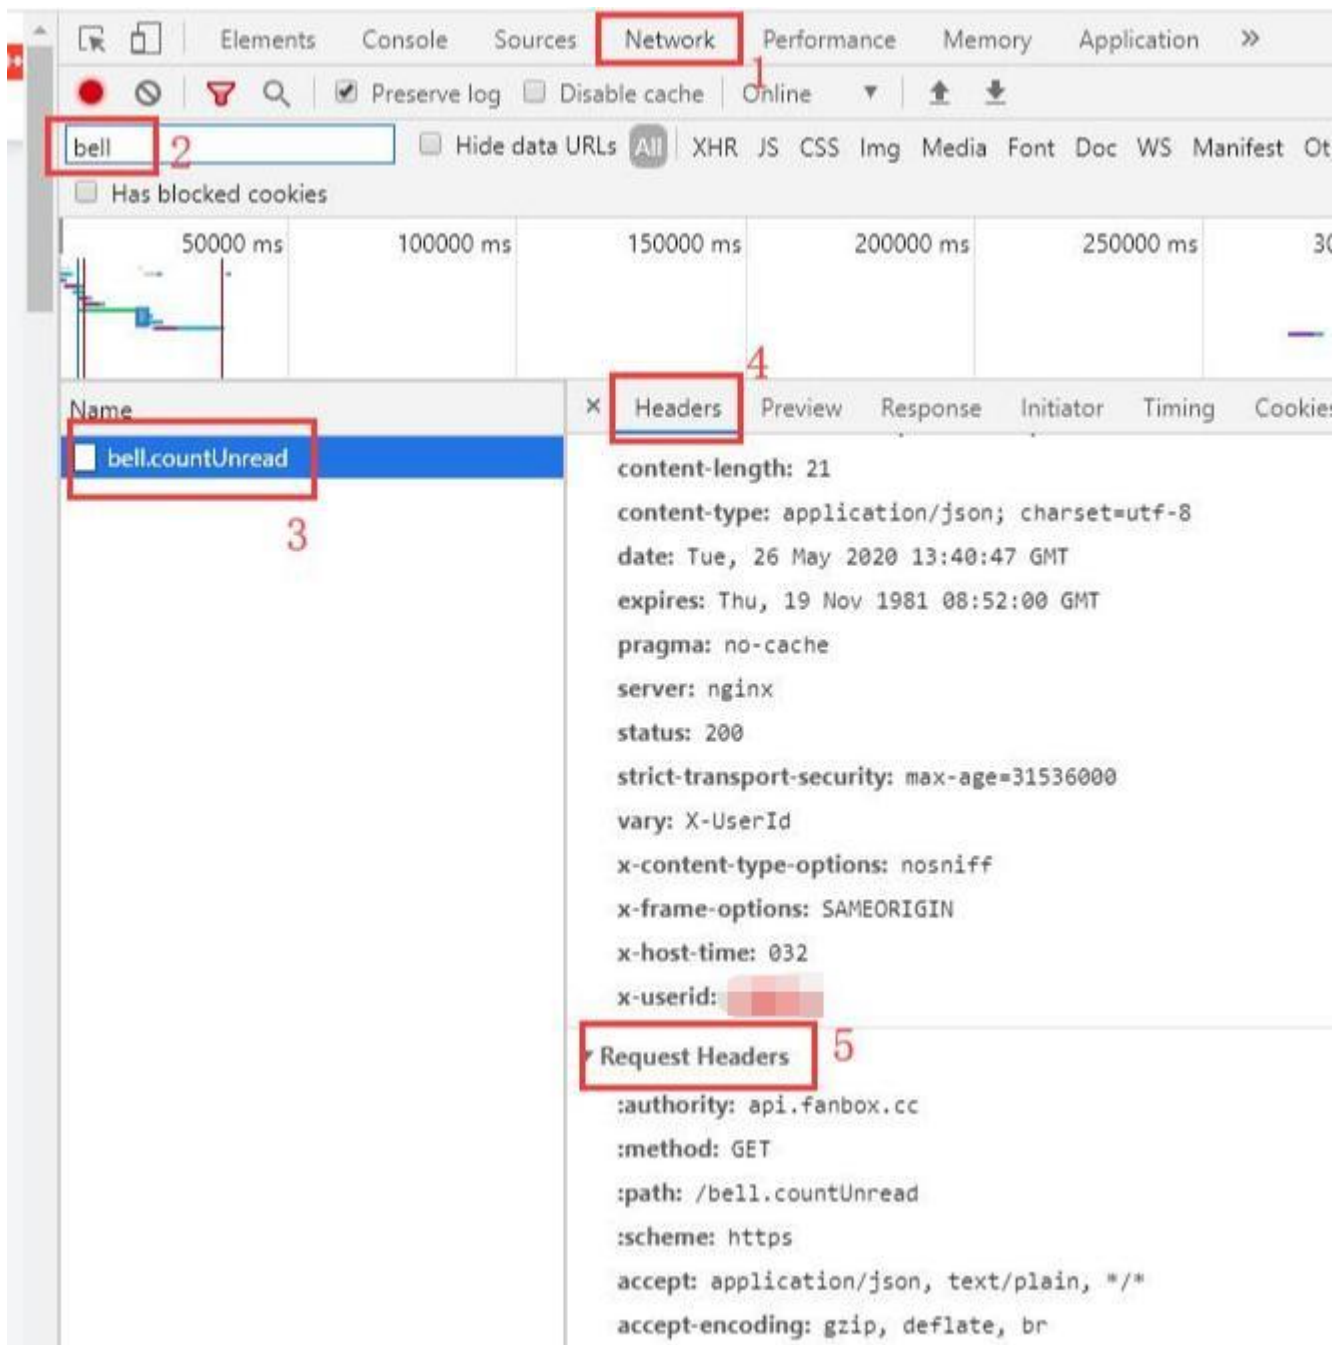

(e.g. Chrome), press [F12] to open Chrome Console, and switch to [Network] sheet.

Open or refresh fanbox.cc, you will see a lot of data packages in [Network] sheet.

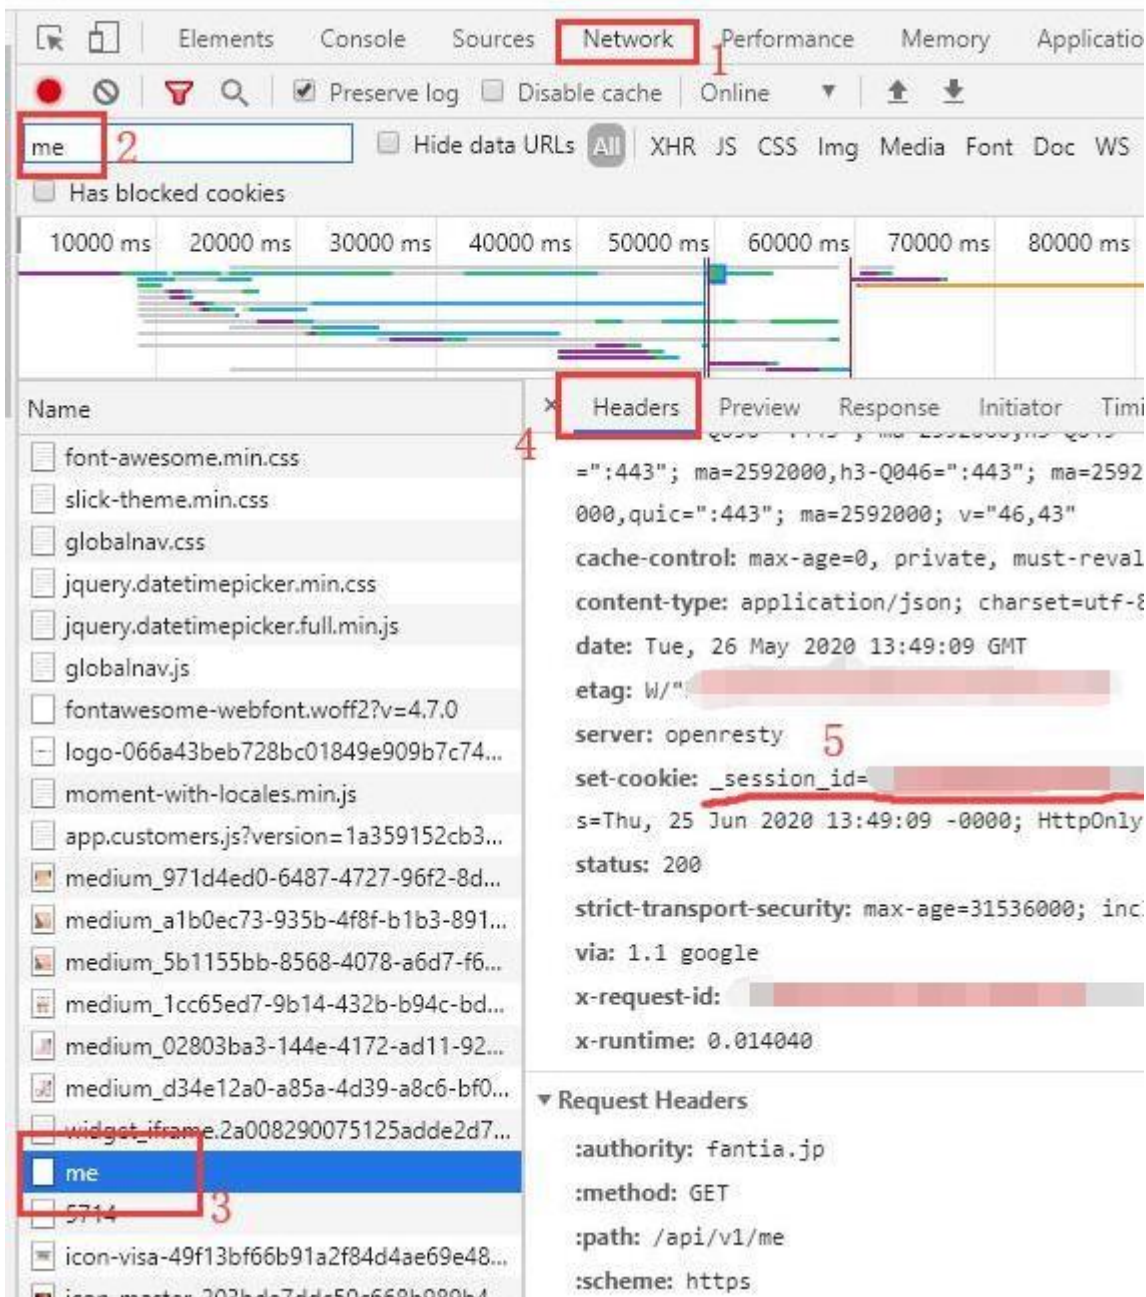

Find [bell.countUnread] and click it to show the details.

Switch to [Header] sheet in [bell.countUnread]'s details,

Find string like [FANBOXSESSID=2321323\_G94MudVQBDSKAD213nijodsOpzQvpWJbXRKO], that is Fanbox's Cookies.

In Fantia, you need to find package which is named [me](Request Url is <https://fantia.jp/api/v1/me>)  
Find string like [\_session\_id=36d11fdsb3456gfy544366e3f0ec], that is Fantia's Cookies.

Patreon is use inside browser to login, so the cache folder will be create into soft folder, named [ChromiumCache].

Do not tell anybody your cookies!

Do not tell anybody your cookies!

Do not tell anybody your cookies!

## 2. Proxy Setting:

If you need Proxy to connect Fanbox or Fantia or Patreon, you can set it.

If you don't need this, you can click [Proxy] to black means [don't use proxy].

Format is write in textbox's background.

### 3. Until:

Set time ranges from [now] to [Until].

Same as Proxy, click to black means [don't use Until].

### 4. SavePath:

Double click on the textbox will open FolderSelector.

Soft will automatically creates [Creator name] folder inside of [SavePath].

So I suggest setting [Fanbox] and [Fantia] and [Patreon] folder.

### 5. [Url] and [Cost] and [Update SupportList]

After input [Cookies], you can click [Update SupportList] button.

Fanbox will get Creators who you are supported.

Fantia has \$0 plan, so some Creator will show at top who you are paid more than \$0.

Patreon is the same as Fanbox.

[Update SupportList] will get plan info and set to [Cost].

The SupportList you has getted will be saving and loading when you open soft next time.

If you change plan, please click again or change [Cost] by yourself.

In Patreon, soft will show login page when you are not login, and continue after you login.

Otherwise, if you want to download free content from a creator you doesn't support,

Select [Custom] in SupportList, input the creator url, click [OK].

Format is write in textbox's background.

The [Custom] is default mode.

If [Cost] is dollar, please x100. (e.g. \$2 write 200)

### 6. Begin Capture

Finish 1~5, you can click [OK] to begin capture.

In Patreon, soft will show login page when you are not login, and continue after you login.

### 7. Posts Page

Soft will capture and show all posts in time ranges.

Fantia will stop capture when over ranges because Fantia always take new posts to top.

Patreon will stop capture when over ranges because Patreon doesn't have [UpdateTime].

Fanbox will get all posts and just show which is in ranges because Fanbox has [UpdateTime] but doesn't take it to top.

When you change time ranges after capture:

e.g. 2020/05/01 change to 2020/04/01

Fanbox will show posts directly, but Fantia and Patreon will capture again.

e.g. 2020/04/01 change to 2020/05/01

All directly.

Posts can filter by [All] or [No Files] or [Include Link].

In theory, Fantia doesn't have External links, but Fanbox and Patreon include External links with high probability.

Soft can not download from External links, so you can filter [Include Link] to check when downloading.

Click post title will open document to show post content.

Click Cover will load cover if it has cover.

## 8. Download Page

After Capture, the download page will show, but do not start.

Here has four buttons in the DownloadList, [Look Post],[Start/Pause],[Pause and ReStart],[Go to First],[Cancel]

[Look Post] will open document which post include this file

[Start/Pause] Start or Pause

[Pause and ReStart] will Pause and Continue when downloading, or reset status when error.

[Go to First] Move to top when this file is waiting download

[cancel] Cancel and move to bottom.

And three buttons in the CompletedList, [Look Post],[Open File],[Open Folder]

[Look Post] the same as above.

[Open File] Open the file.

[Open Folder] Open the folder which include this file.

Default ThreadCount is 3.

## 9. Document Page

Can show post content.

In the bottom, click the filename or imagename will add to DownloadList.

## 10. Technique

[Cost] > 1, will get all posts of not free.
